Beschreibung

Bitte beachten Sie das Sicherheitsdatenblatt! [LINK](#)

Ein typischer Plastikmodell-Klebstoff arbeitet mit dem Verschweißungseffekt. Das heißt, er löst den Kunststoff an und verbindet so die Stellen sehr fest miteinander. Revell Contacta Liquid ist ein superdünner Flüssigklebstoff, der mit dem Pinsel aufgetragen wird. Der Kleber wird an der Innenseite der Teile aufgetragen, dann können die Bauteile in der gewünschten Position fixiert werden.
